800 EDGEWARE HOUSE

Historic Infill Residence | Los Angeles, CA

Located on the last vacant lot in the historic Angelino Heights neighborhood, 800 Edgware is a new Craftsman-style residence designed within a strict historic context.

At RoTo Architects I have worked across design, documentation, permitting, bidding coordination, and construction administration. The project is currently under construction.

800 EDGEWARE HOUSE | DESIGN TO CONSTRUCTION

Angelino Heights, Los Angeles | Under construction

P.A_L

Construction photographs document the transition from design intent to built work, including exterior massing, shingle cladding, window installation, and site relationships.

KUWAIT SCIENTIFIC CENTER

Dhow Landscape | Kuwait

Landscape and visitor-experience proposal centered on relocating historic dhow ships into the public landscape.

The vessels are treated as cultural artifacts and anchors within a sequence of paths, gardens, gathering areas, and exterior exhibits. The landscape builds a narrative around Kuwait's relationship with the dhow and the sea.

KUWAIT SCIENTIFIC CENTER | CULTURAL LANDSCAPE + EXPERIENCE

Historic dhow relocation integrated with paths, gardens and exterior interpretation

Landscape Plan

The Experience

The experience will be centered on Kuwaiti culture and its deep relationship with the dhow ships. We begin with the craft of dhow-building, a tradition passed down through generations, blending empirical knowledge, seafaring intuition, and an intimate understanding of wood, wind, and water. This isn't just naval engineering; it's cultural science. Where geometry, balance, and hand-hewn skill intersect with the rhythms of life along the Gulf. By exploring how these vessels are constructed and used, the exhibit reveals the dhow not only as a mode of transport or trade, but as a vessel of Kuwaiti identity.

Kuwait Scientific Center

Kuwait Scientific Center

The project organizes movement and interpretation around a new dhow location, weaving cultural heritage into the public landscape and visitor sequence.

Kuwait Scientific Center

GRIFFITH PARK
Visitor Center Redesign | Los Angeles, CA

Visitor Center redesign developed through a RabCup collaboration. The work focused on the visitor journey and the integration of interpretive displays, interactive tables and walls, environmental graphics, and digital media.

My scope included architectural design and construction documentation for experience-driven features and spatial improvements.

Interactive / Technical Design

PEACOCK IMMERSIVE THEATER

The Stanley Hotel | Colorado | 2024

Immersive theater experience developed through a YKL freelance collaboration.

The work combined programming, show-control setup, visual and sound effects, and onsite technical problem solving for a theatrical haunted-house environment. Consumer electronics were adapted into compact, project-specific tools when off-the-shelf solutions did not fit the experience.

01 REPURPOSED AUDIO CUE DEVICE

Baby monitors were modified and repurposed as compact speakers that could play a specific audio cue at a specific time or trigger inside the experience.

02 BATTERY-POWERED IR ILLUMINATOR

A small infrared bulb salvaged from a remote control was powered by a battery and used as an invisible light source. This allowed the team to see actors in darkness through IR-sensitive cameras without introducing visible light into the scene.

These prototypes are small, but they show a recurring approach in my work: understand the spatial and technical problem first, then build the simplest reliable tool required by the experience.

THE STORYTELLER MACHINE

MATCHBOX GALLERY | 2022
DOME FEST WEST | 2024

The StoryTeller Machine explores AI as a spatial storytelling medium. Spoken stories are interpreted through speech recognition, then translated into visual prompts that generate imagery using tools such as Stable Diffusion.

Rather than presenting AI output on a conventional screen, the project turns the generated narrative into an immersive visual environment, allowing the audience to move between story, point of view, visual style, and generated worlds.

The project was installed at Matchbox Gallery in 2022 and later presented in a fulldome format at Dome Fest West in 2024.

ROLE / CONTRIBUTION

Concept development · interaction design · AI workflow · spatial media · visual system development

Interactive narrative selection

Generated narrative + image world

Full dome spatial visualization

DOMEST WEST | 2024 — Fulldome presentation of generative story imagery

INTERACTION + GENERATION WORKFLOW

The system uses speech recognition to understand the spoken input and extract key narrative elements. These elements become the basis for AI-generated visuals. The resulting imagery is then composed as an immersive spatial experience rather than a single static image.

Ocaso Festival Festiva (Interactive Totem) Tamarindo Costa Rica

Interactive Totem. 2 Small totems projected with interactive art. Tools: Kinect (sensor) Resolume, and VVVV (Node programming software) Main objective was to serve as an introduction to the main stage. Both totems located at the entry provided interactive projections that invited the user to move and dance.

Homework

(Interactive / Digital Design) Wherever

Since college I have developed a passion for interaction. From how people interact with space to space that interacts with people. For the past 4 years I have spent most of my free time learning and experimenting with tools and software that would let me take the interaction of digital world to the physical space. Below are some experiments I created to apply acquired knowledge.
